

Manly, Mosman, North Sydney
Bush Fire Management Committee

Bush Fire Risk Management Plan

Prepared by the Manly, Mosman, North Sydney Bush Fire Management Committee; pursuant to section 52 of the Rural Fires Act, 1997. In accordance with the Regulations to the Rural Fires Act 1997, the draft bush fire risk management plan will be exhibited for a period of not less than 42 days during which time submissions are invited from the public.

As such, members of the public, whether as private individuals or as members of community interest groups are invited to comment on the plan. Submissions should be in writing, and as detailed and specific as possible; however any comments, no matter how brief or general are welcome. All comments received will be referred to the Bush Fire Coordinating Committee with the plan for their final deliberation and approval.

Prior to finalising the plan, the Bush Fire Management Committee is required to consider the submissions to plan and prepare a review for consideration by the Bush Fire Coordinating Committee. Under the Act, the Bush Fire Coordinating Committee may approve the plan, amend the plan or reject the plan in the light of public submissions.

If significant changes are made to the plan after public exhibition, the draft plan will be placed on further exhibition prior to its final adoption.

The closing date for comments on this plan is:

21st April 2010

Comments should be forwarded to:

Executive Officer

Manly, Mosman, North Sydney Bush Fire Management Committee

99 Shirley Road

Crows Nest NSW 2065

Additional information or enquires on any aspect of the plan can be obtained from, The Executive Officer by email, MMNSBFMC@fire.nsw.gov.au or by telephoning (02) 9901 4746.

Authorisation

In accordance with Part 3 Division 4 of the Rural Fires Act 1997, this Draft Plan has been prepared by the Manly, Mosman, North Sydney Bush Fire Management Committee and has been endorsed at the BFMC meeting on 29th April 2010 for submission to the Bush Fire Coordinating Committee.

Recommended

Cr. Adele Heasman

Chairperson

Manly, Mosman, North Sydney Bush Fire Management Committee

Approved

Shane F. Z. [unclear], AFSM 22-9-10
Chairman

On behalf of the NSW Bush Fire Coordinating Committee

NSW Bush Fire Coordinating Committee

Glossary

Assets: anything valued by the community which includes houses, crops, heritage buildings and places, infrastructure, the environment, businesses, and forests, that may be at risk from bush fire.

Bush Fire: a general term used to describe fire in vegetation, includes grass fire.

Bush Fire Hazard: the potential severity of a bush fire, which is determined by fuel load, fuel arrangement and topography under a given climatic condition.

Bush Fire Risk: the chance of a bush fire igniting, spreading and causing damage to the community or the assets they value.

Bush Fire Risk Management: a systematic process that provides a range of treatments which contribute to the well being of communities and the environment, which suffer the adverse effects of wildfire/bush fire.

Bush Fire Threat: potential bush fire exposure of an asset due to the proximity and type of a hazard and the slope on which the hazard is situated.

Consequence: outcome or impact of a bush fire event.

Fire Fighting Authorities: the NSW Rural Fire Service, NSW Fire Brigades, the National Parks and Wildlife Service and Forests NSW.

Likelihood: the chance of a bush fire igniting and spreading.

Major Bush Fire: A bush fire which requires the attendance of multiple brigades, or causes damage to property or injury to one or more persons.

Display area: geographic area determined by the Bush Fire Management Committee which is used to provide a suitable area and scale for community participation and mapping display purposes.

Recovery costs: the capacity of an asset to recover from the impacts of a bush fire.

Risk Acceptance: an informed decision to accept the consequences and the likelihood of a particular risk.

Risk Analysis: a systematic process to understand the nature of and to deduce the level of risk.

Risk Assessment: the overall process of risk identification, risk analysis and risk evaluation.

Risk Identification: the process of determining what, where, when, why, and how something could happen.

Risk Treatment: the process of selection and implementation of measures to modify risk.

Vulnerability: the susceptibility of an asset to the impacts of bush fire.

Chapter 1. Introduction

1.1 Background

Under the *Rural Fires Act 1997* the Bush Fire Coordinating Committee (BFCC) must constitute a Bush Fire Management Committee (BFMC) for each area in the State, which is subject to the risk of bush fires. Each BFMC is required to prepare and submit to the BFCC a draft Bush Fire Risk Management Plan (BFRMP).

A BFRMP is a strategic document that identifies community assets at risk and sets out a five-year program of coordinated multi-agency treatments to reduce the risk of bush fire to the assets. Treatments may include such things as hazard reduction burning, grazing, community education, fire trail maintenance and establishing community fireguard groups.

Annual programs to implement the treatments identified in this plan will be undertaken by the relevant land managers and fire fighting authorities.

In exercising its functions under the *Rural Fires Act 1997*, including the preparation of a draft bush fire risk management plan, the *Manly, Mosman, North Sydney* BFMC is required to have regard to the principles of ecologically sustainable development (ESD).

This document and the accompanying maps together form the BFRMP for the *Manly, Mosman, North Sydney* BFMC area.

This BFRMP has been prepared by the *Manly, Mosman, North Sydney* BFMC and covers both public and private lands. This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC.

The BFCC recognises that climate change has the potential to increase bush fire risk. The risk assessment process applied in this BFRMP is based on current climatic conditions. The BFCC will monitor information on climate change and will modify the process when necessary.

1.2 Aim and Objectives

The **aim** of this BFRMP is to minimise the risk of adverse impact of bush fires on life, property and the environment.

The **objectives** of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property and the environment;
- manage fuel to reduce the rate of spread and intensity of bush fires, while minimising environmental/ecological impacts;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

1.3 Description of the Manly, Mosman, North Sydney BFMC Area

1.3.1 Location and land tenure

The *Manly, Mosman, North Sydney* BFMC area occupies the eastern portion of Sydney harbour's lower north shore and includes the Local Government Areas of *Manly Council, Mosman Council and North Sydney Council*.

The area covered by the *Manly, Mosman, North Sydney* BFMC is 3367.6 hectares and includes the land tenures outlined in Table 1.1.

Land Manager*	% of BFMC area
National Parks & Wildlife Service (DECC)	15.23
Forests NSW	0
Department of Lands	6.55
Local Government	21.09
Private	57.01
Other**	0.12

Table 1.1 Land Tenure

** *Department of Defence*

** *Sydney Harbour Federation Trust (SHFT)*

1.3.2 Climate and bush fire season

The typical / average climate in the *Manly, Mosman, North Sydney* BFMC area is for uniform rainfall throughout the year, although higher rainfall can be experienced in the months of February to March. The bush fire season generally runs from October to March, in which high daytime temperatures are expected.

Prevailing weather conditions associated with the bush fire season in the *Manly, Mosman, North Sydney* BFMC area are strong North West winds, low humidity and high temperatures. These conditions combined with predominantly dry sclerophyllic vegetation dramatically influence the behaviour of bush fires in the area. Although bush fires may occur at any time of the year, the highest probability of bush fires occurs in December and January.

1.3.3 Population information

The population of the *Manly, Mosman, North Sydney* BFMC area is approximately 131,827 people. The major population centres are *Manly, Mosman, and North Sydney*.

1.3.4 History of bush fire frequency and ignition cause

The *Manly, Mosman, North Sydney* BFMC area has on average 20 bush fires per year, of which *none* can be considered a major fire. *No Section 44 has ever been declared in this area.*

The main sources of ignition in the *Manly, Mosman, North Sydney* BFMC areas are deliberate ignitions; camp fires; fire by misadventure & lightning strikes.

Chapter 2. Identifying and Assessing the Bush Fire Risk

2.1 Process

The Australia/New Zealand Standard *AS/NZS 4360: 2004 Risk Management* was used as the basis for the risk assessment process. See Figure 2.1 for the steps involved. For a detailed description of the process undertaken see the Bush Fire Risk Management Planning Guidelines for Bush Fire Management Committees on the RFS website: www.rfs.nsw.gov.au.

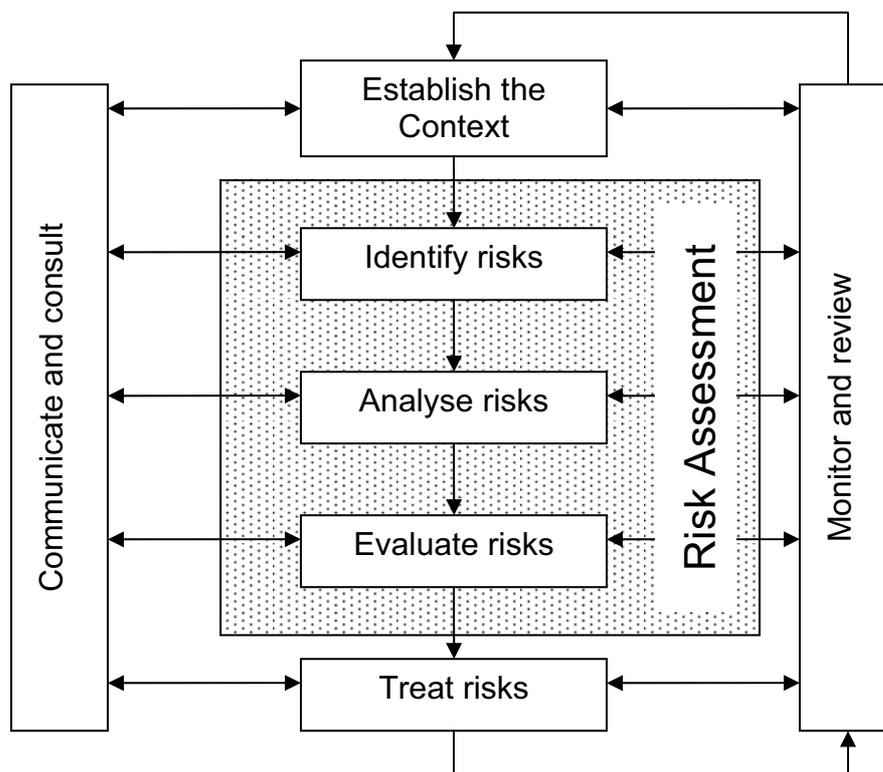

Figure 2.1 Overview of the risk assessment process

2.2 Communication and Consultation

Community participation is an integral part of risk management. The Community Participation Strategy involved developing and implementing a process to address the needs, issues and concerns of stakeholders within the BFMC area in regards to the BFRMP. See Appendix 1 for the Community Participation Strategy used by the *Manly, Mosman, North Sydney* BFMC in preparing this BFRMP.

2.3 Identifying the Bush Fire Risk

Identifying the level of bush fire risk firstly involved identifying important community assets considered to be at risk from bush fire in the *Manly, Mosman, North Sydney* BFMC area, and then assessing the likelihood and consequence ratings.

2.3.1 Assets

BFMC members and the community, including RFS volunteers, identified assets within the Manly, Mosman, North Sydney BFMC area that they believed were at risk of being adversely affected by bushfire.

The assets were divided into four asset types:

Human settlement

- Residential areas including urban bushland interface areas and rural properties;
- Special Fire Protection areas including schools, hospitals, nursing homes, and tourist facilities; and
- Other human settlement areas including commercial and industrial areas where distinct from major towns.

Economic

- Agricultural; e.g. major silos, regional saleyards, cropping/grazing land;
- Commercial/industrial e.g. major industries, waste treatment plants, sawmills;
- Infrastructure e.g. large power lines, gas and oil pipelines, railway lines, electricity substations, communication facilities;
- Tourist and recreational e.g. tourist sites and facilities, resorts, retreats;
- Mines;
- Commercial forests e.g. pine plantations, eucalypt plantations and commercial native forests; and
- Drinking water catchments.
- Military facilities

Environmental

- Threatened species, populations and ecological communities as defined under the NSW Threatened Species Conservation Act 1995 & Commonwealth Environmental Protection and Biodiversity Conservation Act 1999
- Ramsar listed wetlands
- Locally/regionally significant species and ecological communities, such as species and ecological communities especially sensitive to fire within the context of the area

Cultural

- Aboriginal significance – Aboriginal places and items of significance;
- Non-indigenous heritage – places and items arising from the early occupation of NSW by European or other non-indigenous settlers; and
- Other cultural assets – community halls, clubs and recreational facilities.

See Appendix 2 for the full list of assets identified in the Manly, Mosman, North Sydney BFMC area. See maps 1-3 for the location of assets to be treated under this BFRMP.

2.3.2 Assessing the Bush Fire Risk - Consequence

Once the assets were identified, the consequence of a bush fire impacting on these assets was assessed.

See Appendix 2 for the consequence ratings assigned to each asset identified in the Manly, Mosman, North Sydney BFMC area.

The different asset types had different assessment processes used to determine the consequence. These processes are identified below.

Human settlement

A potential fire behaviour model using vegetation type, slope and separation distance was used to produce a threat rating for human settlement assets. The vulnerability of the asset to a bush fire was also assessed and a rating assigned. These ratings were then used to assess the consequence of a bush fire impacting upon a human settlement asset.

Special Fire Protection (SFP) assets were considered inherently more vulnerable to bush fire due to mobility capacity, knowledge and/or other issues relating to their inhabitants, (e.g. the elderly, infirm, children or tourists) and therefore stricter requirements for vulnerability assessment and rating were applied.

Economic

The level of economic impact e.g. local, regional or state, as well as the economic recovery costs (how long and complicated a financial recovery will be) of the asset were identified. These ratings were used to assess the consequence of a bush fire impacting upon an economic asset.

Environmental

Environmental assets with known minimum fire threshold were assessed to determine if they were at risk of a bush fire within the 5 year life of the BFRMP using fire history *and fire threshold* data. Those environmental assets which were within or above the fire threshold were not assessed in the BFRMP, as the negative impact of a fire within the 5 year period was determined as being low and may even be of benefit to the asset and surrounding habitat.

The vulnerability of an environmental asset was determined by its conservation status and its geographic extent (distribution across the landscape). Vulnerability and potential impact

of bush fire were used to assess the consequence of a bush fire impacting upon an environmental asset.

Cultural

For non-indigenous historical, Aboriginal and other cultural assets a potential fire behaviour model using fuel load, slope and proximity was used to produce a threat rating. The physical vulnerability of the asset to a bush fire was also assessed. These ratings were then used to assess the consequence of a bush fire impacting upon a cultural asset.

2.3.3 Assessing the Bush Fire Risk - Likelihood

For all asset types the likelihood of a bush fire occurring was assessed. This involves considering vegetation type, fire history, including ignition cause and patterns, known fire paths, access, containment potential and potential fire run (size of the vegetated area). See Appendix 2 for the likelihood ratings assigned to each asset identified in the Manly, Mosman, North Sydney BFMC area.

2.3.4 Identifying the level of risk

The consequence and likelihood ratings were then used to identify the level of risk. See Appendix 2 for the risk ratings assigned to each asset identified in the Manly, Mosman, North Sydney BFMC area.

2.3.5 Evaluating the Bush Fire Risk

Once the risk ratings for each asset were identified, they were evaluated to:

- a) confirm that risk levels identified in the risk analysis process are appropriate and reflect the relative seriousness of the bush fire risk on the ground;
- b) identify which assets require treatments; and
- c) identify appropriate treatments and priorities.

2.3.6 Prioritising Treatments

No organisation has limitless resources to deal with adverse risk. It is therefore necessary to define priorities. The bush fire risk ratings determined were used to prioritise the risk treatments, i.e. areas of extreme risk were considered first for treatment, then very high, then high then medium then low.

2.3.7 Risk Acceptability

Risks below a certain level were assessed as not requiring treatment within the life of this plan. This is due to a combination of *public education, general mitigation works and Fire agencies response times and resources availability*. Within the Manly, Mosman, North Sydney BFMC area the level of acceptability is High. Areas of *Medium and low* risk are likely to be managed by routine procedures and so do not require a specific application of resources.

Chapter 3. Treating the Risk

3.1 *Bush Fire Management Zones*

Bush Fire Management Zones were identified within the Manly, Mosman, North Sydney BFMC area and mapped (see maps 1-3). These zones identify the fire management intent for a specific area. See Table 3.1 for descriptions of the zones and their purposes. The four categories of Bush Fire Management Zones are:

- Asset Protection Zone (APZ);
- Strategic Fire Advantage Zone (SFAZ);
- Land Management Zone (LMZ); and
- Fire Exclusion Zone (FEZ).

Some of these zones (usually Land Management Zones) may be further classified within this category by the land manager, e.g. LMZ -Heritage Management Zone (NPWS).

LMZs that have been identified as a polygon on the map will have defined management objectives. Below is a list of each identified LMZ and its associated management objectives.

Zone	Purpose	Suppression Objective(s)	Zone characteristics
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undefended assets.	As per RFS document <i>Standards for Asset Protection Zones</i> .
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the speed and intensity of bush fires, and reduce the potential for spot fire development; To aid containment of wildfires to existing management boundaries.	To improve the likelihood and safe use of: Parallel Attack suppression strategies within the zone. and/or Indirect Attack (back burning) in high to very high fire weather conditions within the zone. To reduce the likelihood of: Crown fire development within the zone. and/or Spot fire ignition potential from the zone	Zone width related to suppression objectives and dependant upon: <ul style="list-style-type: none"> • Topography • Aspect • Spotting propensity • Location of adjacent firebreaks • Mosaic pattern of treatment Assess Overall Fuel Hazard (OFH) once vegetation communities reach minimum fire thresholds within this plan. Management practices should aim to achieve mosaic fuel reduction patterns so that the majority of the SFAZ has an OFH of less than high.
Land Management Zone	To meet relevant land management objectives in areas where APZs or SFAZs are not appropriate.	As per the land management and fire protection objectives of the responsible land management agency. To reduce the likelihood of spread of fires. To undertake mosaic burning	As appropriate to achieve land management e.g. heritage and/or fire protection e.g. broad scale mosaic burning objectives.
Fire Exclusion Zone	To exclude bush fires.	N/A	Variable dependant on size of fire sensitive area requiring protection.

Table 3.1 Bush Fire Management Zones: Purpose, objectives and characteristics

NB: OFH refers the Overall Fuel Hazard Guide as described in the document published by (Dept. of Sustainability and Environment 3rd ed. 1999 & NPWS version); State-wide procedures for assessment of fuel hazard will be developed in conjunction with the BFCC.

Note: All areas that are not mapped or described as APZs or SFAZs are considered as LMZs.

3.2 BFMC Wide Treatments

BFMC wide treatments are activities which reduce the overall bush fire risk within the BFMC area and are undertaken on an ongoing basis as part of normal business. These treatments are not linked to specific assets in the BFRMP, rather they are applied across all or part of the BFMC area as designated by legislation or agency policy. BFMC wide treatments include the following:

- **Reviewing the bush fire prone land map**

These maps identify bush fire prone land and are used to trigger whether a development application is assessed using *Planning for Bush Fire Protection*¹.

- **Ensuring developments in bush fire prone land comply with *Planning for Bush Fire Protection***

This assessment process requires new applications for development to include bush fire protection measures.

- **Using the Local Environment Plan/s (LEPs) to control developments in areas with a bush fire risk**

LEPs can be used to exclude development in extreme bush fire risk areas or where bush fire protection measures cannot be incorporated.

- **Varying the standard bush fire danger period as required**

In years where the weather is particularly adverse the bush fire danger period may be brought in early or extended. This is assessed every year by the BFMC.

- **Requiring permits during the bush fire danger period**

In the bush fire danger period a fire safety permit is required to light a fire in the open. Permits specify conditions such as fire fighting equipment that must be on site, or restrict burns based on weather conditions.

- **Prosecution of arsonists/offenders**

Under the *Rural Fires Act 1997* persons may be prosecuted for breaching the conditions on a fire permit, lighting a fire during a Total Fire Ban, allowing fire to escape their property, or other breaches of the Act.

- **Investigation of bush fire cause**

All bush fires which do not have a known cause are investigated to identify how they started.

- **Normal fire suppression activities**

Responding to bush fire is a normal business activity for the fire fighting authorities.

- **Assessing and managing compliance with strategic fire fighting resource allocation provisions**

- Strategic fire fighting resource allocation provisions is the process used to identify the number of stations, brigades and appliances required in an area, and considers members, training, assets and hazards.

- **Preparation of a S52 Operations Coordination Plan**

¹ NSW Rural Fire Service 2006 *Planning for Bush Fire Protection: A guide for councils, planners, fire authorities and developers*.

The Operations Coordination Plan is prepared biannually and sets out how coordinated fire fighting will occur. It includes specific operational restrictions on fire fighting techniques in certain areas, where fires will be managed from, and how agencies involved can communicate during operations.

- **Fire Management Plans or Plans of Management**

Some land management agencies have developed fire management plans or plans of management with specific fire or fuel management strategies, for example a Forests NSW Regional Fuel Management Risk Plan, a NPWS Fire Management Strategy. These publicly exhibited plans form the basis for operational fire planning on public parks, reserves and forests.

- **Bush Fire Hazard Complaints**

If someone is concerned about possible bush fire hazards on a neighbouring property or any other land, then this can be reported to the RFS Commissioner or their local RFS Fire Control Centre. The complaint will be investigated and may result in a notice being issued to the landowner or manager to reduce the hazard.

3.3 Asset Specific Treatments

There are *five* broad strategy groups available to treat the bush fire risk to assets identified in the BFRMP.

The types of asset specific treatments in each strategy group used in the *Manly, Mosman, North Sydney* BFMC area are listed below. A full list of the treatment strategies in the *Manly, Mosman, North Sydney* BFMC area are in Appendix 3.

Strategy	Targeted treatments used in the <i>Manly, Mosman, North Sydney</i> BFMC area
Ignition Management	Suspend fire generated activities on days of very high to extreme fire danger. Undertake patrols of National Parks during TOBANS. Close National Parks and Sydney Harbour Federation Trust Managed Land, as required.
Hazard Reduction	Manage fuel loads; bushland structure and accessibility Perform annual maintenance along APZ and maintain annual Hazard Reduction Works Program Manage land as per North Head Fire Management Plan
Community Education	Manage CFU as per NSWFB policy Community information, (Letterbox drops)
Preparedness	Inspect and maintain fire trail as required Manage CFU as per NSWFB policy
Other	

Table 3.2 Asset specific treatments used in the Manly, Mosman, North Sydney BFMC area

3.4 Fire Thresholds

The vegetation in the *Manly, Mosman, North Sydney* BFMC area was classified into fire threshold categories (Table 3.3).

Vegetation formation	Minimum SFAZ Threshold	Minimum LMZ Threshold	Maximum Threshold	Notes
Rainforest	NA	NA	NA	Fire should be avoided.
Alpine complex	NA	NA	NA	Fire should be avoided.
Wet Sclerophyll forest (shrubby sub formation)	25	30	60	Crown fires should be avoided in the lower end of the interval range.
Wet Sclerophyll forest (grassy sub formation)	10	15	50	Crown fires should be avoided in the lower end of the interval range.
Grassy woodland	5	8	40	Minimum interval of 10 years should apply in the southern Tablelands area. Occasional intervals greater than 15 years may be desirable.
Grassland	2	3	10	Occasional intervals greater than 7 years should be included in coastal areas. There was insufficient data to give a maximum interval; available evidence indicates maximum intervals should be approximately 10 years.
Dry sclerophyll forest (shrub/grass sub formation)	5	8	50	Occasional intervals greater than 25 years may be desirable.
Dry sclerophyll forest (shrub sub formation)	7	10	30	Occasional intervals greater than 25 years may be desirable.
Heathlands	7	10	30	Occasional intervals greater than 20 years may be desirable.
Freshwater wetlands	6	10	35	Occasional intervals greater than 30 years may be desirable.
Forested wetlands	7	10	35	Some intervals greater than 20 years may be desirable.
Saline wetlands	NA	NA	NA	Fire should be avoided.
Semi-arid woodlands (grassy sub formation)	6	9	No max	Not enough data for a maximum fire interval.
Semi-arid woodlands (shrubby sub formation)	10	15	No Max	Not enough data for a maximum fire interval.
Arid shrublands (chenopod sub formation)	NA	NA	NA	Fire should be avoided.
Arid shrublands (acacia sub formation)	10	15	No Max	Not enough data for a maximum fire interval.

Table 3.3 Fire Thresholds for Vegetation Categories

3.5 Annual Works Programs

The land management agencies and fire fighting authorities responsible for implementing the treatments identified in this plan will include those treatments in their annual works programs detailing how, when, and where the required activities will be undertaken.

3.6 Implementation

When the treatments identified in this BFRMP are implemented there are a number of issues that need to be considered by the responsible agency including environmental assessments and approvals, smoke management and prescribed burn plans.

Chapter 4. Performance Monitoring and Reviewing

4.1 Review

This BFRMP must be reviewed and updated within each successive five-year period from the constitution of the BFMC. The Manly, Mosman, North Sydney BFMC will also review this plan as necessary to account for any changes in context or risk. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

4.2 Monitoring

The BFMC is required to monitor progress towards the completion of treatment works listed in the BFRMP, and the timeliness of the works.

4.3 Reporting

The BFMC is required to report annually to the BFCC on its progress in implementing the bush fire risk management activities identified in this plan.

4.4 Performance Measurements

State wide performance measurements which are linked to the BFRMP have been identified by the BFCC. All BFMCs must use these to monitor and report on their success in reducing the bush fire risk in their BFMC area.

Manly-Mosman-North Sydney BFMC Bush Fire Risk Management

NORTH SYDNEY - Map Display Area
 Map 1 of 3

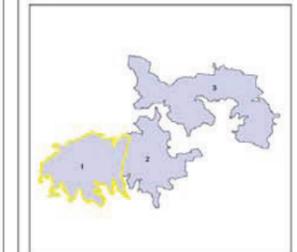

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Manly-Mosman-North Sydney Bush Fire Management Committee (BFMC) pursuant to section 52 of the Rural Fires Act 1997.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

The objectives of this BFRMP are to:

- reduce the number of human-induced bush fire ignitions that cause damage to life, property or the environment;
- manage fuel to reduce the spread and intensity of bush fires while maintaining environmental/ecological aspects;
- reduce the community's vulnerability to bush fires by improving its preparedness; and
- effectively contain fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Manly-Mosman-North Sydney BFMC, covering the local government areas of Manly, Mosman and North Sydney. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFRMC area, the assets assessed and the risk assessment process used.

Review

Under the Rural Fires Act 1997 this plan must be reviewed and updated within each successive five year period following the completion of the BFRMC. The Manly-Mosman-North Sydney BFMC will review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to the BFRMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

Assets

This BFRMP identifies the assets that are considered by the Manly-Mosman-North Sydney BFMC and community to be at risk from bush fires, assesses the bush fire risk to each asset and assigns treatments designed to mitigate the risk. Assets in the BFRMC area identified as requiring treatments are listed in the assets table. Other assets within the BFRMC area that were assessed as not requiring treatments within the life of this plan are listed in the appendix to the BFRMP document. The Map Ref number 'NA' denotes non-spatial assets.

Treatments

Specific treatments assigned to assets in the Manly-Mosman-North Sydney area are listed in the treatments table and linked to the assets which they are designed to protect. Standard BFMC wide treatments (i.e. not linked to a specific asset) which occur on an ongoing basis within the BFRMC area are:

- increasing the bush fire prone land map;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plans (LEPs) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- issuing alerts during bush fire danger periods;
- provision of appropriate firebreaks;
- management of bush fire resources;
- normal fire suppression activities;
- assessing and ensuring compliance with strategic fire-fighting resource allocation management systems;
- preparation of a SDC Operations Coordination Plan.

Note on LMC: All areas not specifically mapped as an APZ, SPZ or PZ are considered as LMC for this risk management plan. For areas identified by LMC, polygons on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression	Zone
Asset Protection Zone	To protect human life, property and highly valued public assets and values.	To enable the safe use of Bush Attack suppression strategies within the zone. To minimise bush fire impacts on unfortified assets.	As per RFS document Standards for Asset Protection Zones.
Strategic Fire Advantage Zone	To provide strategic areas of fire protection advantage which will reduce the spread and intensity of bush fires, and reduce the potential for bush fire development.	To improve the Bush Attack and safe use of Fuelled Attack suppression strategies within the zone. Bush Attack (back burning) to high to very high weather conditions within the zone. To reduce the likelihood of Crown fire development within the zone and/or fuel fire ignition potential from the zone.	Done with related to suppression objectives and dependent on: <ul style="list-style-type: none"> Topography Vegetation Location of adjacent fire breaks Local pattern of treatment Assets located that Hazard (CFR) once vegetation communities reach minimum fire thresholds within this zone. Management practices should aim to achieve minimum fuel reduction pathways so that the majority of the SPZ has an OPR of less than high.
Land Management Zone	To meet relevant land management objectives in areas where APZs or SPZs are not appropriate.	To reduce the likelihood of spread of fire. To undertake mosaic burning.	As per the land management and protection objectives of the responsible land management agency. To reduce the likelihood of spread of fire. To undertake mosaic burning.
Fire Exclusion Zone	To exclude bush fires.	N/A	Variable dependent on size of the sensitive area requiring protection.

Manly-Mosman-North Sydney BFMC Bush Fire Risk Management

MOSMAN - Map Display Area
 Map 2 of 3

This Bush Fire Risk Management Plan (BFRMP) has been prepared by the Manly-Mosman-North Sydney Bush Fire Management Committee (BFMC) pursuant to section 52 of the Rural Fires Act 1997.

The aim of this BFRMP is to reduce the adverse impact of bush fires on life, property and the environment.

The objectives of this BFRMP are to:

- reduce the number of human-induced bush fire incidents that cause damage to life, property or the environment;
- manage fuel to reduce the spread and intensity of bush fires while retaining environmental/ecological integrity;
- reduce the community's vulnerability to bush fires by improving its preparedness, and effectively control fires with a potential to cause damage to life, property and the environment.

This map forms part of the BFRMP for the Manly-Mosman-North Sydney BFMC, covering the local government areas of Manly, Mosman and North Sydney. It should be viewed in conjunction with the accompanying BFRMP document which provides further details on the BFMC area, the assets assessed and the risk assessment process used.

Review

Under the Rural Fires Act 1997 this plan must be reviewed and updated within each successive five year period following the constitution of the BFMC. The Manly-Mosman-North Sydney BFMC will also review this plan as necessary. This may be triggered by a range of circumstances, including but not limited to:

- changes to BFMC area, organisational responsibilities or legislation;
- changes to the bush fire risk in the area; or
- following a major fire event.

Assets

This BFRMP identifies the assets that are considered by the Manly-Mosman-North Sydney BFMC and potentially to be at risk from bush fire, assesses the bush fire risk to each asset and designs treatments to mitigate the risk. Assets in the BFMC area are identified as requiring treatments, including but not limited to:

- assets that were assessed as being at risk from bush fire; and
- assets that are listed in the appendix to the BFRMP document. The Map Ref number 'NA' denotes non-spatial assets.

Treatments

Specific treatments assigned to assets in the Manly-Mosman-North Sydney area are listed in the treatment table and linked to the assets which they are designed to protect. Standard BFMC treatments are:

- removing the bush fire prone land mass;
- ensuring developments in the bush fire prone land comply with Planning for Bush Fire Protection;
- using the Local Environment Plan (LEP) to control development in areas with a bush fire risk;
- varying the standard bush fire danger period as required;
- requiring permits during bush fire danger periods;
- provision of professional/contractor investigation of bush fire cause;
- removal of suppression vehicles;
- assessing and managing compliance with strategic fire-fighting resource allocation management systems;
- preparation of a SIZ Operators Coordination Plan.

Note on LMC: All areas not specifically mapped as an APZ, SFAZ or FZ are considered as NAZ for this risk management plan. For areas identified by an LMC on the map, please refer to the BFRMP document for the specific land management objectives.

Zone	Purpose	Suppression	Zone
Asset Protection Zone	To protect human life, property and highly valued public assets and values. To minimise bush fire impacts on undeveloped assets.	To enable the safe use of Direct Attack suppression strategies within the zone. To minimise bush fire impacts on undeveloped assets.	As per RFS Assessment Standards and dependent upon: Topography Aspect Sloping proximity to spot fire development. Location of fuel load. Assets Critical Fuel Hazard (CFH) and vegetation communities with minimum fire thresholds within the zone. Management practices should aim to address potential bush fire reduction pathways so that the majority of the SFAZ are an OFZ or less than high.
Strategic Advantage Zone	To provide strategic areas of the protection advantage which will reduce the spread and intensity of bush fire, and reduce the potential for spot fire development. To set containment of wildfires to existing management.	To improve the bushfire and safe use of Parallel Attack suppression strategies within the zone. To set containment of wildfires to existing management within the zone. To reduce the bushfire and safe use of Parallel Attack suppression strategies within the zone. Management practices should aim to address potential bush fire reduction pathways so that the majority of the SFAZ are an OFZ or less than high.	Zone with related to suppression objectives and dependent upon: Topography Aspect Sloping proximity to spot fire development. Location of fuel load. Assets Critical Fuel Hazard (CFH) and vegetation communities with minimum fire thresholds within the zone. Management practices should aim to address potential bush fire reduction pathways so that the majority of the SFAZ are an OFZ or less than high.
Land Management Zone	To meet relevant land management and fire protection objectives in areas where APZs or SFAZs are not appropriate.	As per the land management and fire protection objectives of the responsible land management agency. To reduce the bushfire and safe use of Parallel Attack suppression strategies within the zone.	As appropriate to the land management and fire protection objectives of the responsible land management agency. To reduce the bushfire and safe use of Parallel Attack suppression strategies within the zone.
Fire Exclusion Zone	To exclude bush fire.	NA	Variable dependent on size of the bushfire area requiring protection.
